Introduction

Thank you for purchasing an indicator or bundle from Kenzing®. This document contains instructions on how the indicator functions and how to personalize the indicator according to your trading strategy. Information on how to access the indicator after purchase is not included in this document and can be found in the Read Me FAQ document.

Understanding the Intelligent Supertrend (AI)

This indicator uses machine learning (Artificial Intelligence) to solve a real human problem.

The artificial intelligence that operates this Supertrend was created by an algorithm that tests ***every single combination of input value across the entire chart history of an instrument for maximum profitability in real-time.***

The Supertrend is one of the most popular indicators on the planet, yet no one really knows what input values work best in combination with each other. A reason for this is because not one set of input values is always going to be the best on every instrument, time-frame, and at any given point in time.

The "Intelligent Supertrend" solves this problem by constantly adapting the input values to match the most profitable combination so that no matter what happens, this Supertrend will be the most profitable.

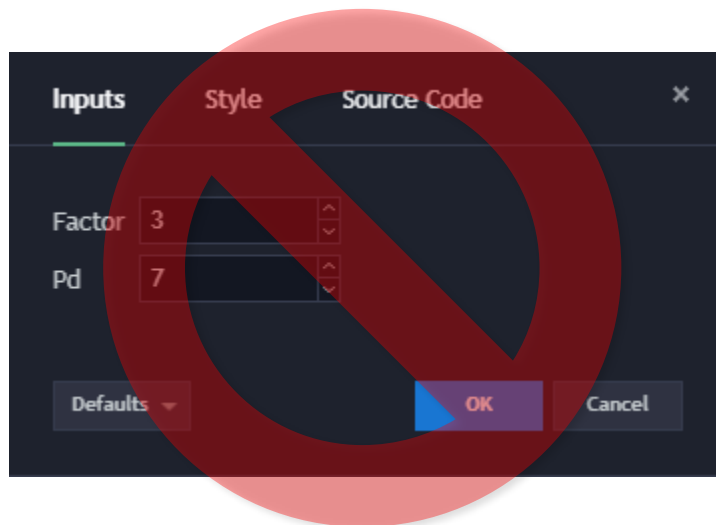

Indicator Utility

The Intelligent Supertrend does not change what has already been plotted and does not repaint in any way which means that it is fully functional for trading in real-time.

Ultimately, there are no limiting factors within the range of combinations that have been programmed. The Supertrend will operate normally but will change input values according to what is currently the most profitable strategy.

Input Values

While a normal Supertrend would include two user-defined input values, the Intelligent Supertrend automates the input values according to what is currently the most profitable combination.

Additional Tools

The Optimised Supertrend is a tool that can be used to visual what input values the Supertrend AI is currently using.

Additional tools to back-test this indicator will be added to this product soon.
